

# Dynamic Documents via API

Hello Raymond Camden, and welcome to the Document Generation API. With this API, you can take your data and create dynamic PDF and Word documents. Using simple tokens in your Word document, you can replace things like this:

My favorite food is sushi and my favorite movie is **Star Wars**.

You can also dynamically insert, and format, the current date: 09/02/25

And how about some dynamic data?

| Name      | Gender | Age |
|-----------|--------|-----|
| Elise     | female | 14  |
| Luna      | female | 13  |
| Crackers  | male   | 13  |
| Gracie    | female | 12  |
| Pig       | female | 10  |
| Zelda     | female | 2   |
| Wednesday | female | 1   |
